1. Introduction

The Open Group Architecture Tool Certification Program (the Program) includes certification for tools supporting the TOGAF® Standard, 10th Edition, a standard of The Open Group,¹ and later minor updates to the Specification.

Architecture modeling tools that support the TOGAF Standard can be submitted for the Program. The certification process for tools supporting the TOGAF Standard assesses whether the tool meets the Conformance Requirements.

The Program is based on two documents:

1. The *Certification Policy*,² which sets out the policies and processes by which a tool can be certified
2. The *Conformance Requirements* (this document), which holds the requirements tools must meet to achieve certification

This document also recommends a set of optional capabilities for consideration by tool designers.

1.1 Terminology and Definitions

Table 1 defines terms or clarifies the meaning of words used within this document. Where an acronym is also used, it is provided in parentheses.

Table 1: Terminology and Definitions

TOGAF Standard	The TOGAF Standard, 10 th Edition
The TOGAF Standard, 10th Edition	The TOGAF Standard, 10 th Edition, The Open Group Standard (Doc. No. C220, April 2022, published by The Open Group)
Trademark License Agreement (TMLA)	The agreement between the Supplier and The Open Group, which contains the legal commitment by the Supplier to the conditions for use of the applicable Certification Trademark.

1.2 Levels of Certification

There is a single level of certification supported.

¹ The TOGAF® Standard, 10th Edition, a standard of The Open Group (C220), published by The Open Group, April 2022; refer to: www.opengroup.org/library/c220

² Architecture Tool Certification: Certification Policy, Version 1.0 (X117), January 2012, published by The Open Group; refer to: www.opengroup.org/library/x117 (updated version to be reviewed and approved)

1.2.1 TOGAF Framework Tool

Table 2: TOGAF Framework Tool

Purpose	Target Audience
The purpose of the TOGAF Framework Tool designation is to identify tools that organizations can use to support and apply the TOGAF approach, Architecture Development Method (ADM), produce deliverables and artifacts, develop models for transformation initiatives, and model architectures consistently within and across domains.	• Tool vendors planning a conforming implementation of the TOGAF Standard, 10th Edition • End-user organizations seeking or evaluating tools supporting the TOGAF Framework

1.3 Certification Options

Besides the mandatory Conformance Requirements with which a product must comply, there are also additional features that can be optionally supported by the product.

These options are explained in Section 2.2 of this document.

1.4 Migration – None

Existing certified TOGAF tools are not required to be updated to support the TOGAF Standard, 10th Edition.

1.5 Program Logo

Suppliers of Certified Products within the Program are able to use a logo in association with their product (in proposals, in marketing materials, etc.) in accordance with the Trademark License Agreement (TMLA) and Trademark Usage Guide. The label for this version of the Program is shown in Table 3.

Table 3: Program Logo

Label
TOGAF® Framework Tool

2. Conformance Requirements

2.1 Mandatory Requirements

This section contains the mandatory requirements for certification.

2.1.1 Concept Coverage

A conforming product shall support all the core concepts defined in Chapter 2 “The TOGAF Documentation Set” and Chapter 3 “Core Concepts” of the TOGAF Standard, 10th Edition, *Introduction and Core Concepts*.

Types of Architectures

A conforming product shall support the four commonly accepted architectures: Business, Data, Application, Technology, as per §3.3 “What Kind of Architecture Does the TOGAF Standard Deal With?”.

Principles

A conforming product shall support the definition of principles, and in particular Enterprise and Architecture Principles, intended to be enduring and seldom amended, that inform and support the way in which an organization sets about fulfilling its mission, as per §3.8 “Architecture Principles”.

Using the TOGAF Standard with Other Frameworks

A conforming product shall support architecture tailoring including adopting elements from other architecture frameworks, or integrating TOGAF methods with other standard frameworks, best practices, and/or other architecture styles, as per §3.15 “Using the TOGAF Standard with Other Frameworks” and §3.16 “Using the TOGAF Framework with Different Architecture Styles”.

2.1.2 Architecture Development Method (ADM)

The Conformance Requirements in this section refer to sections of the TOGAF Standard, 10th Edition, *Architecture Development Method*.

ADM Phases

A conforming tool shall support the phases of the ADM cycle including some inputs, steps, and outputs, as per Chapters 2-13.

Adaption of the ADM

A conforming tool shall support modifying or extending the ADM to suit the enterprise’s specific needs.

Scoping the Architecture

A conforming tool shall support scoping the architecture, as per §1.5 “Scoping the Architecture”.

Architecture Alternatives

A conforming tool shall support architecture alternatives and trade-offs, as per §1.6 “Architecture Alternatives”.

2.1.3 Interoperability

The Conformance Requirements in this section refer to Chapter 7, “Interoperability Requirements”, of the TOGAF Standard, 10th Edition, *ADM Techniques*.

A conforming tool shall support interoperability internally to the enterprise as well as with other TOGAF certified tools.

2.1.4 Applying the ADM

The Conformance Requirements in this section refer to sections of the TOGAF Standard, 10th Edition, *Applying the ADM*.

Iteration

A conforming product shall support iteration cycles, including capturing changes as described in Chapter 2 “Applying Iteration to the ADM”.

Architecture Landscape

A conforming tool shall support:

- Using the TOGAF Architecture Landscape including levels (strategic, segment, and capability) and characteristics (breadth, depth, time, and recency)
- Defining an Architecture Landscape appropriate to the enterprise

as described in Chapter 3 “Applying the ADM Across the Architecture Landscape”, §3.2 “Architecture Landscape”, and §3.4 “Organizing the Architecture Landscape to Understand the State of the Enterprise”.

Architecture Partitioning

A conforming product shall support architecture partitioning including classification criteria as described in Chapter 4 “Architecture Partitioning”.

2.1.5 Architecture Content

The Conformance Requirements in this section refer to the TOGAF Standard, 10th Edition, *Architecture Content*.

TOGAF Content Framework and Enterprise Metamodel

A conforming product shall support the TOGAF Content Framework and Enterprise Metamodel as described in Chapter 2 “TOGAF Content Framework and Enterprise Metamodel”.

Views and Viewpoints

A conforming product shall support creating stakeholder views and viewpoints as described in Chapter 3 “Architectural Artifacts” and §3.4 “Architecture Views and Architecture Viewpoints”.

Artifacts by ADM Phase

A conforming product shall support creating TOGAF architecture artifacts as described in Chapter 3 “Architectural Artifacts” and §3.6 “Architectural Artifacts by ADM Phase”.

Deliverables by ADM Phase

A conforming product shall support creating TOGAF architecture deliverables as described in Chapter 4 “Architectural Deliverables” and §4.1 “Introduction”.

Enterprise Continuum

A conforming product shall support classifying assets and architectures according to the Enterprise Continuum, including:

- Foundation Architectures / Solutions
- Common Systems Architectures / Solutions
- Industry Architectures / Solutions
- Organization-specific Architectures / Solutions

as described in Chapter 6 “Enterprise Continuum”.

Architecture Repository

A conforming product shall support a Repository based on the TOGAF Architecture Metamodel, including:

- Architecture Capability
- Architecture Landscape
- Standards Library
- Reference Library
- Governance Repository
- Architecture Requirements Repository
- Solutions Landscape

as described in Chapter 7 “Architecture Repository”.

2.1.6 Architecture Governance

The Conformance Requirements in this section refer to TOGAF Standard, 10th Edition, *Enterprise Architecture Capability and Governance*.

Architecture Capability

A conforming product shall support establishing an architecture capability; e.g., using the ADM, as per Chapter 2 “Establishing an Architecture Capability”.

Establishing Architecture Governance

A conforming product shall support establishing an Architecture Governance including:

- Levels of governance
- Processes
- Monitoring
- Governance Framework

as per Chapter 3 “Architecture Governance”.

Architecture Board

A conforming product shall support documenting an Architecture Board and its meetings, as per Chapter 4 “Architecture Board”.

Architecture Contracts

A conforming product shall support documenting Architecture Contracts, as per Chapter 5 “Architecture Contracts”.

Architecture Compliance

A conforming product shall support Architecture Compliance, including:

- Terminology
- Process & Roles
- Timing
- Supporting documentation

as per Chapter 6 “Architecture Compliance”.

2.1.7 Integrating Risk and Security

The Conformance Requirements in this section refer to the TOGAF Standard, 10th Edition, *TOGAF® Series Guide: Integrating Risk and Security within a TOGAF® Enterprise Architecture*.³

³ TOGAF® Series Guide: Integrating Risk and Security within a TOGAF® Enterprise Architecture (G152), published by The Open Group, April 2022; refer to: www.opengroup.org/library/g152.

Security and Risk Modeling

A conforming product shall support risk and security including Enterprise Risk Management and Information Security Management, as per §5.11 “The TOGAF Architecture Content Metamodel”.

Viewpoints, Risk, and Security

A conforming product shall support the viewpoints and business cases built on Security Principles, drivers, key risks, and risk appetite as integral parts of the overall Architecture Vision deliverables, as per §5.2 “Phase A: Architecture Vision”.

Technology Architecture Security Controls

A conforming product shall support documenting controls to include in the Technology Architecture and monitor their use, as per §5.5 “Phase D Technology Architecture”.

Security and Controls Re-Use

A conforming product shall support verifying the efficacy of existing security services and controls earmarked for re-use to ensure that the end-state contains security measures which work and integrate well, as per §5.6 “Phase E Opportunities and Solutions”.

2.2 Optional Requirements

A conforming product shall support all the requirements defined in Section 2.1 (of this document). Additionally, a conformant product may support the following optional features.

2.2.1 ADM Phases

The Conformance Requirements in this section refer to the TOGAF Standard, 10th Edition, *Architecture Development Method*.

ADM Phases

A conforming tool may support all inputs, steps, and outputs of the phases of the ADM cycle, as per Chapters 2-13.

2.2.2 ADM Techniques

The Conformance Requirements in this section refer to the TOGAF Standard, 10th Edition, *ADM Techniques*.

A conforming product may support the use of ADM Techniques:

- Architecture Principles
- Stakeholder Management
- Architecture Patterns
- Gap Analysis

- Migration Planning Techniques
- Interoperability Requirements
- Business Transformation Readiness Assessment
- Risk Management
- Architecture Alternatives and Trade-Offs

2.2.3 Architecture Content

The Conformance Requirements in this section refer to the TOGAF Standard, 10th Edition, *Architecture Content*.

Artifacts by ADM Phase

A conforming product may support suggesting the appropriate artifacts by ADM Phase, as described in Chapter 3 “Architectural Artifacts” and §3.6 “Architectural Artifacts by ADM Phase”.

Deliverables by ADM Phase

A conforming product may suggest the appropriate deliverables by ADM phase, as described in Chapter 4 “Architectural Deliverables” and §4.1 “Introduction”.

2.2.4 Other Capabilities

If a conforming product supports modeling frameworks and languages other than the TOGAF Framework, it may optionally provide the same capabilities for the TOGAF Framework, as it does for the other supported modeling frameworks and languages.

3. Indicators of Compliance

Applicants must complete a Conformance Statement Questionnaire to describe the conformance of their tool to these Conformance Requirements.

In addition, applicants must meet the following indicators of compliance.

3.1 Evidence of Compliance

Applicants must provide the evidence of compliance following the conditions defined in Section 3.3 of this document.

The evidence that shall be provided is:

- Examples of use of the feature described in the requirements defined in Sections 2.1.1, 2.1.2, 2.1.4, 2.1.5, 2.1.6, and 2.1.7 of this document
- Demonstration of interoperability as described in the requirement defined in Section 2.1.3 of this document

3.2 Evidence for Additional Options

Applicants must provide the evidence of compliance following the conditions defined in Section 3.3.

The evidence that shall be provided is:

- Examples of use of the feature described in the requirements defined in Sections 2.2.1, 2.2.2, 2.2.3, and 2.2.4 of this document

3.3 Mechanisms to Provide the Compliance Evidence

Applicants shall provide evidence as follows:

- A set of images illustrating the examples defined in Section 3.1 and Section 3.2 of this document
- A recorded live demo demonstrating the tool's interoperability feature as defined in Section 2.1.3 of this document

In addition, one of the following:

- A recorded live demo demonstrating how the tool complies (mp4 format or similar)
- A user guide including a description of the features defined in the requirements

Note that all the evidence along with all the related conformance documents will be made available on the public register of certified tools.

3.4 Mechanisms to Review the Evidence Provided

The following mechanisms will be used to review the evidence provided:

- Third-party independent assessor
- Testing using a demo tool applying pre-defined scenarios
